Professional Summary

Fullstack Software Engineer specializing in real-time systems, high-performance APIs, and scalable architectures using Java, Javascript, Spring Boot, PostgreSQL, and Redis.

Education

Sinhgad College of Engineering, BE in Computer Engineering (GPA: 8.30/10)

2021 – 2025

Technical Skills

Languages & Frameworks: Java, JavaScript, Spring Boot, React, Next.js

Databases: PostgreSQL, MongoDB, Supabase

Infra & Tools: Docker, Redis, JWT, WebSockets, Git, Postman, Vercel

System Design: REST APIs, real-time systems, caching, authentication & authorization, scalability fundamentals

Projects

Linklitics - Full-Stack URL Shortener

github.com/Sanikadalal/url-shortener

- Designed a Spring Boot backend for URL shortening, redirection, and analytics tracking using PostgreSQL.
- Built secure authentication and authorization workflows using Spring Security and JWT-based access control.
- Containerized and deployed the application using Docker with separate frontend and backend hosting environments.
- **Tech Stack:** Java, Spring Boot, Spring Security, JWT, PostgreSQL, JPA/Hibernate, React, Vite, Tailwind CSS, Docker

CodeFusion - Web-Based Coding IDE

github.com/Sanikadalal/codefusion

- Built a full-stack coding platform supporting project creation, editing, and execution for HTML, CSS, and JavaScript.
- Designed a real-time code execution and preview engine with an interactive split-screen development environment.
- Implemented secure user authentication and cloud-based project persistence using MongoDB.
- Deployed the application on Vercel with responsive UI design and optimized client-side performance.
- **Tech Stack:** MongoDB Atlas, Express.js, React, Node.js, JavaScript, JWT, Vercel

JobScraper - Automated Job Data Extraction Platform

github.com/Sanikadalal/jobscraper

- Built a job aggregation platform that automates extraction and tracking of job listings from LinkedIn.
- Implemented browser-side DOM parsing and data processing workflows to collect and structure job information.
- Streamlined job application tracking by reducing manual data collection and improving information accessibility.
- **Tech Stack:** JavaScript, Chrome Extensions API, Node.js, MongoDB, REST APIs

Experience

Software Engineer, Capgemini

Nov 2025 – Present

- Developing backend applications using Java, Spring Boot, and SQL, focusing on RESTful APIs, business logic implementation, and database-driven workflows.
- Implementing authentication, CRUD operations, and API integrations while following Agile development practices, version control, and code review standards.
- Working on enterprise SAP ABAP development involving Data Dictionary, Reports, Smart Forms, Enhancements, and debugging to support business-critical application requirements.

Backend Developer Intern, CloudScale

Oct 2024 – Dec 2024

- Built a secure Razorpay payment system with backend validation and minimal frontend exposure
- Integrated PostgreSQL with SQLAlchemy for efficient data handling and transactional workflows
- Enhanced application reliability through debugging, testing, and integration documentation.
- Created high-level design documents outlining architecture and implementation details for both systems
